

## Need a Bespoke Project?

At Aquatech Pressmain we love a challenge and are always happy to collaborate with clients to provide the right solution for out of the ordinary projects, as we did with the team at Carlsberg.

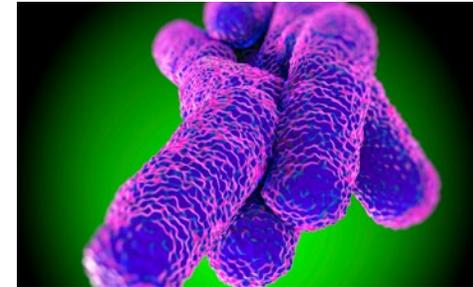

For the production process at their Northampton Brewery, long term client Carlsberg, needed a pressurisation unit that could maintain constant pressure in the High Temperature Hot Water system operating at 170°C.

Aquatech Pressmain designed this unit including innovative new methods, to cool the system water, allowing it to be stored safely and efficiently in the custom stainless steel spill tanks.

Built at the factory in Copford, Essex, the whole pressurisation unit and tanks were installed by AGM Service Engineers with a full telemetry system built in, which is monitored 24/7 at Head Office.

Servicing and maintenance is carried out by AGM Service Engineers, giving Carlsberg peace of mind and continuing the relationship of trust and respect built up over 20 years.

### Did you know not all Fire Priority Valves are built to the same standards?

Our Fire Priority Valve is specially designed not to increase the water temperature protecting from legionella and safeguarding the water quality.

## The small but mighty HM2AV Micromatic

Our best selling HM2AV Micromatic is a compact, cost effective yet powerful booster set, suitable for increasing the water pressure in both residential and commercial properties. The WRAS approved, energy saving variable speed pumps operate as Duty with Standby or Duty and Assist increasing the water pressure to 7.0 bar with a water flow of 4 litres per second.
