Aquatech Pressmain celebrates 40 years of engineering excellence and innovation

Engineering Excellence and Innovation

We have been supplying high quality, reliable and innovative water booster sets and pressurisation units for industrial, commercial and domestic buildings for 40 years this year.

Aquatech Pressmain started in 1982 as "Aquatech Limited" out of a need for the servicing company Acorn, to manufacture and supply packaged pump sets, specialist control panels and controls. In 2006 Aquatech Limited bought Pressmain Pressurisation and created "Aquatech Pressmain".

With over 100 loyal staff, it is still family run with family values and a reputation for carefully designed products and 24/7 support from highly trained, experienced Service Engineers, covering the whole of the UK from offices in Glasgow, Manchester, Colchester and Southampton.

Looking to the future, there are many exciting new products in development for pressure boosting, pressurisation and fire sectors, together with new advanced intelligent controls packages, aimed at making Aquatech Pressmain the greenest, most efficient, and reliable on the market. Ensuring that Aquatech Pressmain will be leading driving product efficiency, helping the environment and reducing the industry's carbon footprint.

The Aquabreak AB5 Booster Set

Our Aquabreak AB5 Booster Set provides a physical break between the mains water, and the pipework supplying the water to your premises, including any hose washdown points, maintaining backflow protection to water regulations Fluid Category 5.

It is ideal for use in bin-stores, dentistry and veterinary practices, clinics, nursing homes, day care units, hairdressing salons and catering businesses.

This reliable unit is compact, easy to fit on the wall and made in stylish and durable stainless steel.

For more information on the Aquabreak AB5 Booster Set, [click here](#).

A Day in The Life of Paul Weeden, Aquatech Pressmain Production Supervisor

Paul joined the company in 2015 as a Workshop Fitter and over the last seven years, due to his hard work and dedication is now the Production Supervisor helping to manage the factory production of all Aquatech Pressmain products.

Paul activates sales orders that the sales team have entered onto the system, allocating and committing the parts for the job, raising purchase orders for any items not held in stock, allocating the job to someone on the factory floor and ensuring everything is available to manufacture the item to the date our customer needs the product on site.

Ensuring the factory is running efficiently, Paul helps with any queries the factory floor staff may have with the building of units, especially the apprentices. When the job is built and tested, Paul completes the works orders on the system, booking the order with the transport company to collect and deliver, ensuring the product arrives on site on time.
